

Walmart Sales Analytics Dashboard - Business Requirements Document (BRD)

1. Executive Summary

This project is a Walmart Sales Analytics Dashboard built using MySQL, Python, and Streamlit to transform raw sales data into actionable insights for business decision-making.

2. Business Objectives

- Provide visibility into sales performance across branches and cities.
- Identify top and worst performing branches and cities.
- Analyze payment methods and customer behavior.
- Evaluate category-level revenue contribution.
- Support data-driven business decisions.

3. SQL Analysis Summary

- Transaction counts and payment method analysis.
- Branch and category performance ranking.
- Revenue and profit calculations.
- Time-based analysis (day, week, month, year).
- Revenue decline detection across branches.

4. Dashboard Features

- KPI Cards: Total Sales, Transactions, Average Sales.
- Top & Worst 10 Cities and Branches.
- Pie Chart for Category Distribution.
- Sales Funnel Analysis.
- Trend Analysis with interactive filters.

5. Business Insights

- Identification of high and low performing regions.
- Payment method trends across branches.
- Category dominance in revenue generation.
- Seasonal and temporal sales patterns.
- Strategic business optimization opportunities.
